No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                        The present sequence encodes a human de novo DNA cytosine

methyltransferase designated DNAT3A. The polypeptides can be administered

therapeurically, especially by expressing encoding polynucleotides, to

treat diseases associated with DNA cytosine methyltransferase, such as

conclusion diseases associated with DNA cytosine methyltransferase, such as

conclusion of dispose, or determine susceptibility to neoplastic disorders,

be used to diagnose, or determine susceptibility to neoplastic disorders,

conclusion they are useful to screen for compounds inhibiting activating the

conclusion of DNA. Such in vitro methylation may be used to anyour

crequiate DNA expression in biological systems, e.g. recombinant DNA

conclusion to vitro may be introduced into a cell/organism to increase

conclusion to vitro may be introduced into a cell/organism to increase

conclusion to vitro methylated. The polypeptides can also be

used to produce antibodies which are useful to detect and purify the

colypeptide or therapeutically e.g. to treat neoplastic disorders. The

polyputoleotides are useful to produce probes and primers which are

cuseful diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300

The present sequence encodes a murine de novo DNA cytosine methyltransferase designated Dnmt3a. The polypeptides can be administered methyltransferase designated Dnmt3a. The polypeptides can be administered therapetrically wespecially by expressing encoding polynucleorides, to treat diseases associated with DNA cytosine methyltransferase, such as neoplastic disorders e.g. carcinomas, sarcomas and leukemias. They can be used to diagnose, or determine susceptibility to neoplastic disorders, by assaying for polypeptide expression levels in mammalian cells/body fluids. They are useful to screen for compounds inhibiting/activating the polypeptide expression levelylation may be used to direct or regulate DNA expression in biological systems, e.g. recombinant DNA methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypeptide for which the native DNA is under-methylated or not methylated. The polypeptides can also be used to produce antibodies which are useful to detect and purify the polypeptide are useful to produce probes and primers which are useful diagnostically.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (ABL89449-ABL90853) and proteins MBB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. bereat and ovarian cancer and other cancers of the adrenal gland, bone, bone arrow, breast, gastrointestinal tract, liver, ung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's

The DNMT3B gene also produces, through alternate splicing, at least two shorter isoforms termed CC DNMT3B2 (comprising amino acids 1-355 and 376-943 and 807-853 cf AAY54058) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising acids 1-355, 376-743 and 807-853 cf AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 cf AAY54058) and DNMT3B3 (comprising polymorphides can be accomplianted to disprose, or determine susceptibility to neoplastic disorders, by assaying for complementation susceptibility to neoplastic disorders, by assaying for complementation acids of the polymorphide. The polymorphide can also be used for in vitro de novo methylateion of DNA. CC such in vitro methylated in vitro de novo methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypeptide for which the native DNA is compression of a desired polypeptide for which the native DNA is compression and beneathylated are useful to detect and purify the polypeptide cor therapeutically e.g. to treat neoplastic disorders. The complementation are useful to produce probes and primers which are useful cor diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The present sequence encodes a murine de novo DNA cytosine methyltransferase designated Dnmt3b1. The Dnmt3b gene also produces, through alternate splicing, at least two shorter isoforms of 840 and 777 amino acid residues, termed Dnmt3b2 and Dnmt3b3 (sequences of therapeutically), especification). The polypeptides can be administered cot given in the specification). The polypeptides can be administered correct diseases associated with DNA cytosine methyltransferase, such as neoplastic disorders e.g. carcinomas, sarcomas and leukemias. They can be used to disagnose, or determine susceptibility to neoplastic disorders, by assaying for polypeptide expression levels in mammalian cells/body fluids. They are useful to screen for compounds inhibiting/activating the colpypeptide can also be used for in vitro de novo methylation of DNA. Such in vitro methylation may be used to direct or regulate DNA expression in biological systems, e.g. recombinant DNA methylated in vitro methylation of a desired polypeptide for which the native DNA is under-methylated or not methylated. The polypeptide so not methylated or the polypeptides can also be used to produce antibodies which are useful to detect and purify the polypeptide or therapeutically e.g. to treat neoplastic disorders. The colpyper or the displace produce probes and primers which are

ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB7893 to ABB79004 represent proteins encoded by the ABQ60776 to ABG60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polynucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I) and for determining the phenotype of cells in a sample

of cells from a parient. (I) is useful for determining the presence of colon cancer in a cell or tissue type, for determining the presence or state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2574

AAH32943 to AAH37155 and AAG73514 to AAG77788 represent human colon cancer—associated nucleic acid molecules (N) and proteins (P), where cancer antigens are collectively known as colon cancer antigens. The colon cancer antigens have eyclostatic acidity and can be used in gene cancer antigens have eyclostatic acidity and can be used in gene cancer antigens have eyclostatic acidity and be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders or associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing to rocal in a patient's genome that affect the activity of P by expressing to express the proteins or to supplement the patients own production of P. C. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB37789 represent sequences used in the exemplification of the present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2004 ACGGGCTGCTGCGGCGGCGAAAGACTGGCCCTCCCGGCTCCAGATGTTCTTCGCTAATA 2063

Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a semience complementary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers sets can be used in antisense therapy and in gene therapy. The primers sets can be used in antisense polynucleotides, particularly full length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH3166 to AAH13628 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerates chain refection (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The configuration of the polymerectides are also used in diagnostics as expressed sequence tags of the formity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving an applyagation in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical insolution and polymucleotide sequences have applications in capposition and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations of mutations and produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human DNA and diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GTGCTGTCTCTCTTTGATGGAATCGCTACAGGGCTCCTGGTGCTGAAGGACTTGGGCCATT 2194

Probes can be derived from the present sequence. CC The probes are immobilised and are preferably useful as hybridisable CC array elements in a microarray for monitoring the expression of several CC polynucleotides. The microarray can be used in the diagnosis of cancers couch as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma CC and tetratocarcinoma etc., immunopathology such as AIDS, Addison's CC disease, adult respiratory distress syndrome, allergies, anaemia, asthma, CC disease, amnesia, amyotrophic lateral sclerosis, bipolar disorder, CC disease, amnesia, amyotrophic lateral sclerosis, bipolar disorder, CC catatonia and cerebral neoplasms etc. The microarray can also be used to investigate an individual's predisposition to a disease such as cancer, CC investigating cellular response to infection, drug treatment etc. The microarray can be used for convestigating can be used for diagnostics, prognostics and treatment conversion, drug discovery and development, toxicological and continuity studies, forensics, pharmacogenomics etc. The array can be used for continuity studies, pharmacogenomics etc. The array can called for monitoring discovery pharmacogenomics etc. The array can be used for continuity studies, forensics, pharmacogenomics etc. The array can called the monitoring discovery and development, toxicological and called the microarray can be used for continuity studies, forensics, pharmacogenomics etc. The array can also be used for continuity studies, forensics, pharmacogenomics etc. The array can also be used for continuity studies, forensics, pharmacogenomics etc. The array can be used for continuity studies are continuity studies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Identifying gene signatures in 3'-directed human cDNA library - e. for diagnosis of abnormal cell function, by preparing cDNA that reflects relative abundance of corresp. mRNA in specific human Ġ

WPI; 1995-206931/27.

Claim 1; Page 991-992; 2245pp; Japanese.

A single-stranded DNA (or its complementary strand or the corresp. CC double-stranded DNA) which comprises one of the 7837 "GS" sequences CC given in AAT19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) CC sequences were obtained from 3'-directed cDNA libraries prepared CC from various human tissues; synthesis of cDNA was initiated from the CC 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-CC untranslated sequence is unique to a particular mRNA species, almost CC all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of CC different mRNAs in the particular tissue from which it was derived. CC determined (sep. using primers and probes derived from the GS cequences) as a means of diagnosing abnormal cell function or for recognising different cell types.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver cancer from the partient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a cissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as markers that can be used to monitor disease states, disease progression, only expression, but was obtained in electronic form part of the printed specification, but was obtained in electronic format directly from WIPO can fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical cagent to be tested for anti-neoplastic activity, determining a change in capression of at least one gene (I) of a signature gene set, where (I) cc comprises a sequence (S) selected from 8447 sequences (given in ABL61664 cc to ABL70110), or is at least 95% identical to (S), where a change in capression is indicative of anti-neoplastic activity. (I) has cytostatic cativity and can be used in gene therapy. M1 can be used for screening cc an anti-neoplastic agent, and can be used for producing a product which cs the data collected with respect to the anti-neoplastic agent as a cresult of M1, and the data is sufficient to convey the chemical cs tructure and/or properties of the agent. M1 can be used in the ct reatment of cancer such as colon, breast, stomach, lung, thyroid, cesophageal, ovarian, kidney, prostate or pancreatic cancer, cc adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, cc infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumour.

```
The invention relates to novel genes (ABA11004-ABA21514) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant)agonists are useful. The mucleic acids, proteins, antibodies and (ant)agonists are useful. The mucleic acids, proteins, antibodies and (ant)agonists are useful. The mucleic acids proteins, and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy, and (f) infections diseases such as viral, bacterial, fungal and parasitic infections.

Conversion of the patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                               Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
